

Package ‘longMI’

December 11, 2023

Title Longitudinal Measurement Invariance

Version 1.0.0

Description Fits longitudinal measurement invariance models using the 'lavaan' package.
For a thorough exposition of testing measurement invariance,
see Millsap (2011) <[doi:10.4324/9780203821961](https://doi.org/10.4324/9780203821961)>.

 Comparison

Comparison Measurement Invariance Models

Description

Comparison Measurement Invariance Models

Usage

```
Comparison(configural = NULL, weak = NULL, strong = NULL, strict = NULL, ...)
```

Arguments

<code>configural</code>	Fitted configural invariance model.
<code>weak</code>	Fitted weak invariance model.
<code>strong</code>	Fitted strong invariance model.
<code>strict</code>	Fitted strict invariance model.
<code>...</code>	Additional arguments to pass to lavaan::lavTestLRT() .

Examples

```
data("osbornesudick1972", package = "longMI")
configural_fit <- Configural(
  data = osbornesudick1972,
  time_points = c(1, 6),
  factor_loadings = list(
    c(1, 2, 3, 4)
  )
)
weak_fit <- Weak(
  data = osbornesudick1972,
  time_points = c(1, 6),
  factor_loadings = list(
    c(1, 2, 3, 4)
  )
)
strong_fit <- Strong(
  data = osbornesudick1972,
  time_points = c(1, 6),
```

```

    factor_loadings = list(
      c(1, 2, 3, 4)
    )
  )
  strict_fit <- Strict(
    data = osbornesudick1972,
    time_points = c(1, 6),
    factor_loadings = list(
      c(1, 2, 3, 4)
    )
  )

Configural

Configural Invariance Model

Description

Configural Invariance Model

Usage

```

Configural(
  data,
  time_points,
  factor_loadings,
  covariances = FALSE,
  model_add = NULL,
  ...
)

```

Arguments

data	Dataframe. The function assumes that the data is in the wide format and the variables are named as follows: <code>paste0("y", time_point, "_", item_number)</code> . For example, for the item 1 from the first time point, the variable name should be <code>y1_1</code> .
time_points	Numeric vector of discrete time points.
factor_loadings	List with length equal to the number of factors. Each element of the list is the item number of items for the specific factor.

covariances	Logical. If covariance = TRUE, model the covariances of the measurement error.
model_add	Additional specification added to the lavaan model syntax.
...	Additional arguments to pass to lavaan::cfa() .

  factor_loadings = list(
    c(1, 2, 3, 4)
  )
)
library(lavaan)
summary(configural_fit)
```

Invariance

Test Longitudinal Measurement Invariance

Description

Test Longitudinal Measurement Invariance

Usage

```
Invariance(
  data,
  time_points,
  factor_loadings,
  covariances = FALSE,
  model_add = NULL,
  ...
)
```

Arguments

data	Dataframe. The function assumes that the data is in the wide format and the variables are named as follows: <code>paste0("y", time_point, "_", item_number)</code> . For example, for the item 1 from the first time point, the variable name should be <code>y1_1</code> .
time_points	Numeric vector of discrete time points.
factor_loadings	List with length equal to the number of factors. Each element of the list is the item number of items for the specific factor.
covariances	Logical. If <code>covariance = TRUE</code> , model the covariances of the measurement error.
model_add	Additional specification added to the lavaan model syntax.
...	Additional arguments to pass to <code>lavaan::cfa()</code> .

osbornesudick1972	<i>Wechsler Intelligence Scale for Children Data from Osborne and Sudick (1972)</i>
-------------------	---

Description

Wechsler Intelligence Scale for Children Data from Osborne and Sudick (1972)

Usage

osbornesudick1972

Format

The data set has the following variables:

- id** ID
- y1_1** Time 1 Information
- y1_2** Time 1 Comprehension
- y1_3** Time 1 Similarities
- y1_4** Time 1 Vocabulary
- y6_1** Time 6 Information
- y6_2** Time 6 Comprehension
- y6_3** Time 6 Similarities
- y6_4** Time 6 Vocabulary

References

Strict	<i>Strict Invariance Model</i>
--------	--------------------------------

Description

Strict Invariance Model

Usage

```
Strict(  
  data,  
  time_points,  
  factor_loadings,  
  covariances = FALSE,  
  model_add = NULL,  
  ...  
)
```

Arguments

- data** Dataframe. The function assumes that the data is in the wide format and the variables are named as follows: `paste0("y", time_point, "_", item_number)`. For example, for the item 1 from the first time point, the variable name should be `y1_1`.
- time_points** Numeric vector of discrete time points.

<code>factor_loadings</code>	List with length equal to the number of factors. Each element of the list is the item number of items for the specific factor.
<code>covariances</code>	Logical. If <code>covariance = TRUE</code> , model the covariances of the measurement error.
<code>model_add</code>	Additional specification added to the lavaan model syntax.
<code>...</code>	Additional arguments to pass to lavaan::cfa() .

strict_fit <- Strict(
  data = osbornesudick1972,
  time_points = c(1, 6),
  factor_loadings = list(
    c(1, 2, 3, 4)
  )
)
library(lavaan)
summary(strict_fit)
```

Strong

Strong Invariance Model

Description

Strong Invariance Model

Usage

```
Strong(
  data,
  time_points,
  factor_loadings,
  covariances = FALSE,
  model_add = NULL,
  ...
)
```

Arguments

data	Dataframe. The function assumes that the data is in the wide format and the variables are named as follows: <code>paste0("y", time_point, "_", item_number)</code> . For example, for the item 1 from the first time point, the variable name should be <code>y1_1</code> .
time_points	Numeric vector of discrete time points.
factor_loadings	List with length equal to the number of factors. Each element of the list is the item number of items for the specific factor.
covariances	Logical. If <code>covariance = TRUE</code> , model the covariances of the measurement error.
model_add	Additional specification added to the lavaan model syntax.
...	Additional arguments to pass to <code>lavaan::cfa()</code> .

strong_fit <- Strong(
  data = osbornesudick1972,
  time_points = c(1, 6),
  factor_loadings = list(
    c(1, 2, 3, 4)
  )
)
library(lavaan)
summary(strong_fit)
```

Weak	<i>Weak Invariance Model</i>
------	------------------------------

Description

Weak Invariance Model

Usage

```
Weak(
  data,
  time_points,
  factor_loadings,
  covariances = FALSE,
  model_add = NULL,
  ...
)
```

Arguments

<code>data</code>	Dataframe. The function assumes that the data is in the wide format and the variables are named as follows: <code>paste0("y", time_point, "_", item_number)</code> . For example, for the item 1 from the first time point, the variable name should be <code>y1_1</code> .
<code>time_points</code>	Numeric vector of discrete time points.
